

E-Gift Cards are redeemed in the same way as Plastic Gift Cards.

How to Process E-Gift Cards

- 1 The customer will hand you a print out of the E-Gift Card** (or show you the email on their phone). It will show an image of your gift card, a gift card number (15 or 16 digits), and a barcode.
- 2 Ring up the sale** in exactly the same way as you would a plastic gift card. (ie. Amount, Clerk ID, etc.)
- 3 Scan the barcode OR key in the gift card number** shown on the print out when prompted to swipe the card or enter the card number.
- 4 A standard receipt will print** showing the remaining balance on the E-Gift Card.

Where did this print out come from?

An E-gift card is a virtual gift card that your customers can instantly send to anyone by email.

Here's how it works: A customer places an order for an E-Gift Card on your online gift card store. The E-Gift Card is instantly emailed to the recipient's email address. The recipient prints the email and brings it into your store.
